

# Notes on assembling the dataset for Elise Collett, student at St.FX

Daniel Ricard

Last modified: 2021-10-12 13:38:13

## Collaboration with St. FX

### Species considered

To get things started, I am generating a dataset similar to that used by Benoit and Swain (2008). Table A1 shows 52 species. Let's try and reproduce that table by using the correct species codes in the RV database.

Table 1: The 52 species of interest, meant to match Table A1 in Benoit and Swain.

		family	LATIN	ENGLISH	aphia_id	species.code
<b>Myxini</b>						
<i>Myxiniiformes</i>						
		Myxinidae	Myxine glutinosa	Atlantic hagfish	101170	241
<b>Elasmobranchii</b>						
<i>Rajiformes</i>						
		Rajidae	Amblyraja radiata	Thorny skate	105865	201
			Leucoraja ocellata	Winter skate	158553	204
			Malacoraja senta	Smooth skate	158554	202
<i>Squaliformes</i>						
		Squalidae	Squalus acanthias	Spiny dogfish	105923	220
		Etmopteridae	Centroscyllium fabricii	Black dogfish	105906	221
<b>Actinopteri</b>						
<i>Aulopiiformes</i>						
		Paralepididae	Arctozenus risso	White barracudina	126352	712
<i>Clupeiformes</i>						
		Clupeidae	Alosa pseudoharengus	Alewife	158669	62
			Clupea harengus	Atlantic herring	126417	60
<i>Gadiformes</i>						

		Gadidae	Boreogadus saida	Arctic cod	126433	110
			Gadus morhua	Atlantic cod	126436	10
			Gadus macrocephalus	Greenland cod	254538	118
			Melanogrammus aeglefinus	Haddock	126437	11
			Pollachius virens	Pollock	126441	16
		Macrouridae	Nezumia bairdii	Marlin-spike grenadier	183289	410
		Merlucciidae	Merluccius bilinearis	Silver hake	158962	14
		Lotidae	Enchelyopus cimbrius	Fourbeard rockling	126450	114
		Phycidae	Phycis chesteri	Longfin hake	158988	112
			Urophycis tenuis	White hake	126504	12
<i>Perciformes</i>						
		Gasterosteidae	Gasterosteus aculeatus	Three-spined stickleback	126505	361
<i>Osmeriformes</i>						
		Osmeridae	Mallotus villosus	Capelin	126735	64
			Osmerus mordax	Rainbow smelt	126737	63
<i>Perciformes</i>						
		Ammodytidae	Ammodytes dubius	Northern sand lance	151520	610
		Anarhichadidae	Anarhichas lupus	Atlantic wolffish	126758	50
<i>Eupercaria incertae sedis</i>						
		Labridae	Tautogolabrus adspersus	Cunner	159785	122
<i>Perciformes</i>						
		Stichaeidae	Leptoclinus maculatus	Daubed shanny	127072	623
			Lumpenus lampretaeformis	Snakeblenny	154675	622
			Stichaeus punctatus	Arctic shanny	293745	624
			punctatus			
		Zoarcidae	Gymnelus viridis	Fish doctor	127096	616
			Zoarcidae (f.)	Eelpouts	125575	598,619,620,627,628,641,642,643,6
			Melanostigma atlanticum	Atlantic soft pout	127120	646
			Zoarces americanus	Ocean pout	159267	640
<i>Pleuronectiformes</i>						

	Pleuronectidae	Glyptocephalus cynoglossus	Witch flounder	127136	41
		Hippoglossoides platessoides	American plaice	127137	40
		Hippoglossus hippoglossus	Atlantic halibut	127138	30
		Limanda ferruginea	Yellowtail flounder	158879	42
		Pseudopleuronectes americanus	Winter flounder	158885	43
		Reinhardtius hippoglossoides	Greenland halibut	127144	31
	Scophthalmidae	Scophthalmus aquosus	Windowpane flounder	158907	143
<i>Perciformes</i>					
	Agonidae	Aspidophoroides monopterygius,	Alligatorfishes	159458	340, 341
		Aspidophoroides olrikii			
		Leptagonus decagonus	Atlantic poacher	127191	350
	Cottidae	Artediellus sp.	Hookear sculpins	126147	306, 880
		Icelus spatula	Spatulate sculpin	127200	314
		Myoxocephalus octodecemspinosus	Longhorn sculpin	159520	300
		Myoxocephalus scorpioides	Arctic sculpin	127202	316
		Myoxocephalus scorpius	Shorthorn sculpin	127203	301
		Triglops murrayi	Moustache sculpin	127205	304
	Cyclopteridae	Cyclopterus lumpus	Lumpfish	127214	501
	Liparidae	Liparis sp.	Seasnails	126160	503, 504, 505, 506, 508, 512, 513
<i>Scorpaeniformes</i>					
	Hemitripterae	Hemitripterus americanus	Sea raven	159518	320
<i>Perciformes</i>					
	Psychrolutidae	Cottunculus microps	Polar sculpin	127235	307
	Sebastidae	Sebastes sp.	Redfish unidentified	126175	23

### Dataset of abundance per tow

Now extract set cards and catch cards for representative sets in strata 415 to 439, and compute the yearly stratified random estimate of abundance per tow, corrected for gear, vessel and diurnal effects.

```
data(rv)

yrs <- 1971:2020
x <- rv.good.sets(yrs)
```

```

x <- x[x$stratum %in% c(415:439),]
x$unique.id <- paste(x$vessel.code, x$year, x$cruise.number, x$set.number, sep="-")

y <- rv$cat
y$unique.id <- paste(y$vessel.code, y$year, y$cruise.number, y$set.number, sep="-")
y<-adjust(y,x)

## output matrix, called C in Benoit & Swain
C.matrix <- matrix(NA, nr=length(sp.codes), nc=length(yrs), dimnames=list(species=sp.codes, year=yrs))
C.df <- expand.grid(year=yrs, species=sp.codes, normalised=NA)
## same matrix, but not normalised to 0-1
C.stratified.matrix <- matrix(NA, nr=length(sp.codes), nc=length(yrs), dimnames=list(species=sp.codes, year=yrs))

for(i in 1:length(sp.codes)){
  s <- sp.codes[i]
  if(s==503) { # snailfishes
    ss <- c(503, 504, 505, 506, 508, 512, 513)
    this.y <- y[y$species %in% ss,]
    ## sum for each set
    agg.df <- aggregate(number.caught~unique.id, this.y, sum)
    vars <- c("unique.id", key(x))
    this.agg.y <- merge(x[,vars], agg.df, by="unique.id")
    this.agg.y$species<-503
    z <- merge.catch(x, rvcat(this.agg.y), var = "number.caught") #
  }
  if(s==340) { # alligatorfishes
    ss <- c(340,341)
    this.y <- y[y$species %in% ss,]
    ## sum for each set
    agg.df <- aggregate(number.caught~unique.id, this.y, sum)
    vars <- c("unique.id", key(x))
    this.agg.y <- merge(x[,vars], agg.df, by="unique.id")
    this.agg.y$species<-340
    z <- merge.catch(x, rvcat(this.agg.y), var = "number.caught")
  }
  if(s==880) { # hookear sculpins
    ss <- c(306, 880)
    this.y <- y[y$species %in% ss,]
    ## sum for each set
    agg.df <- aggregate(number.caught~unique.id, this.y, sum)
    vars <- c("unique.id", key(x))
    this.agg.y <- merge(x[,vars], agg.df, by="unique.id")
    this.agg.y$species<-880
    z <- merge.catch(x, rvcat(this.agg.y), var = "number.caught")
  }
  if(s==598) { # eelpouts
    ss <- c(598,619,620,627,628,641,642,643,647)
    this.y <- y[y$species %in% ss,]
    ## sum for each set
    agg.df <- aggregate(number.caught~unique.id, this.y, sum)
    vars <- c("unique.id", key(x))
    this.agg.y <- merge(x[,vars], agg.df, by="unique.id")
  }
}

```

```

    this.agg.y$species<-598
    z <- merge.catch(x, rvcat(this.agg.y), var = "number.caught")
  }
  else{
    this.y <- y[y$species==s,]
    z <- merge.catch(x,this.y)
  }

stratified.number.df <- smean(z, "number.caught", by=c("year"))
matrix.row <- (stratified.number.df$mean - min(stratified.number.df$mean)) / (max(stratified.number.df$mean) - min(stratified.number.df$mean))

C.matrix[i,] <- matrix.row
C.df[C.df$species==s,"normalised"] <- matrix.row
C.stratified.matrix[i,] <- stratified.number.df$mean
}

# visualize C matrix using ggplot
C.df$species.name <- species.str(C.df$species, "english")
g <- ggplot(data=C.df,
  aes(x=year, y=species.name, fill=normalised)) + geom_tile() +
  theme_bw() + scale_fill_gradient(low = "white", high = "black")
g

```

### Tow-level dataset

Also provide tow-level data for exploration purposes.

```

strat.stats <- stratum.info(region = "gulf", survey = "rv", stratum = 415:439)

## write to CSV file
csv.fn2 <- paste0("sGSL-RV-data-for-Elise-", format(Sys.time(), "%Y-%m-%d"), "-strata-stats.csv")
keep.vars <- c("stratum", "area", "trawlable.units")
write.csv(strat.stats[, keep.vars], file=csv.fn2)

csv.fn3 <- paste0("sGSL-RV-data-for-Elise-", format(Sys.time(), "%Y-%m-%d"), "-sets.csv")
x.keep.vars <- c("unique.id", "year", "month", "day", "vessel.code", "cruise.number", "gear", "stratum", "set.n")
o.x <- order(x$year, x$set.number)
write.csv(x[o.x, x.keep.vars], file=csv.fn3)

csv.fn4 <- paste0("sGSL-RV-data-for-Elise-", format(Sys.time(), "%Y-%m-%d"), "-catch.csv")
y.keep.vars <- c("unique.id", "species", "number.caught", "weight.caught")
k.spec.keep <- c(strsplit(paste0(taxo.df.out$species.code, collapse=" ", sep=" "), ",")[[1]])
write.csv(y[y$species %in% k.spec.keep, y.keep.vars], file=csv.fn4)

csv.fn5 <- paste0("sGSL-RV-data-for-Elise-", format(Sys.time(), "%Y-%m-%d"), "-C-matrix.csv")
write.csv(C.matrix, file=csv.fn5)

csv.fn6 <- paste0("sGSL-RV-data-for-Elise-", format(Sys.time(), "%Y-%m-%d"), "-C-stratified-matrix.csv")
write.csv(C.stratified.matrix, file=csv.fn6)

## create a backbone Excel file to copy and paste the CSV files into
library(xlsx)
xl.fn <- "sGSL-RV-data-for-Elise-2021-10-12.xlsx"
t.df <- data.frame(x=1)
write.xlsx(t.df, file=xl.fn, sheetName = "Species list")
write.xlsx(t.df, file=xl.fn, sheetName = "Strata statistics", append = TRUE, row.names=FALSE)
write.xlsx(t.df, file=xl.fn, sheetName = "Sets", append = TRUE, row.names=FALSE)
write.xlsx(t.df, file=xl.fn, sheetName = "Adjusted catch", append = TRUE, row.names=FALSE)
write.xlsx(t.df, file=xl.fn, sheetName = "C matrix", append = TRUE, row.names=FALSE)
write.xlsx(t.df, file=xl.fn, sheetName = "C stratified matrix", append = TRUE, row.names=FALSE)

```

The xlsx package in R was giving a memory error when writing an Excel file, so I am outputting CSV files and assembling them in an Excel file manually instead.
